## EXPLANATORY NOTES

### Introduction

In February 1979 a survey, based on the monthly population survey, was conducted throughout Australia in order to obtain information about some aspects of the mobility of persons who had been employed at some time during 1978, e.g. the number of different employers for whom employees had worked during 1978 or the number of different businesses in which employers and self-employed persons had been engaged.

2. A preliminary publication containing a summary of the more important results was published on 22 June 1978. This publication provides estimates in greater detail. The results of similar surveys in November 1972, February 1975 and February 1976 were published in a series of publications entitled *Labour Mobility* (6209.0).

3. The survey was based on a multi-stage area sample of private dwellings (about 15,000 houses, flats, etc.) and non-private dwellings (hotels, motels, institutions, etc.) and covered about one third of one per cent of the population of Australia. The information was obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers, the interviews being conducted during the two weeks beginning on Monday, 12th February, 1979.

### Scope

4. The survey included all persons aged fifteen years and over except:

- (a) members of the permanent defence forces
- (b) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations
- (c) overseas visitors holidaying in Australia
- (d) members of non-Australian defence forces (and their dependants) stationed in Australia, and
- (e) boarding school students, patients in hospitals and sanatoria and inmates of reformatories, gaols, etc.

5. The estimates relate to the labour mobility in 1978 of persons covered by the survey in February 1979. Because of emigration, deaths and other exits not all persons employed in 1978 were covered. Labour mobility may relate to experience outside Australia.

### Definitions

6. For this survey, each person was assigned to a labour force category for each week in 1978 on the basis of his actual activity (i.e. whether working, looking for work, etc.) during that week. The principal categories appearing in the tables in this publication are:

- (a) *Persons in the labour force.* A person was classified as having been in the labour force during any week in which he was employed or looking for work as defined in (b) and (c) below.
- (b) *Employed persons.* A person was classified as having been employed during a week if, in that week, he had:
  - (i) worked for one hour or more, for pay, profit, commission or payment in kind, in a job or business, or on a farm (including employees, employers and self-employed persons), or
  - (ii) worked fifteen hours or more without pay in a family business (or farm), or
  - (iii) had a job, business or farm, but was on paid leave (including sick leave).
- (c) *Persons looking for work.* A person was classified as looking for work during a week if, in that week, he did no work at all, did not have a job or business, and was looking for work. No constraints concerning the taking of active steps to find work, or availability to start work, applied.
- (d) *Persons not in the labour force* are all those who, in any week, were not in the categories "employed" or "looking for work", as defined above. For the purposes of this survey a person who was on strike and who did no work during a week was classified as not in the labour force in that week.
- 7. For the purposes of this survey:
  - (a) *Industry* was classified according to the 1969 Australian Standard Industrial Classification (ASIC). A change of industry was defined as a change at the three digit level "ASIC group".
  - (b) *Occupation* was classified according to the 1976 Population Census Classification of Occupations. A change of occupation was defined as a change at the three digit level "occupation code".
  - (c) *A job* was defined as:
    - (i) employment as a wage or salary earner (or unpaid family helper) by a particular employer, in a particular location: or
    - (ii) self-employment (with or without employees) in a particular location.

- (d) *Location.* In capital cities and major towns, each suburb was considered to be a different location; otherwise, each town and each country area associated with a town constituted a separate location.
- (e) *A change of job* may have involved a change of employer without a change of job location; a change of location without a change of employer; or a change in both employer and location. For example, the movement of an employer's operations to premises in a different location would entail a change of job for employees who moved to the new location. Promotion or transfer of an employee which involved a move to premises in a different location would also constitute a change of job. It should be noted, however, that for a person who worked at different sites for the same employer (for example, a construction worker), his base of operations (i.e. his employer's office, depot, yard, etc.) was considered to be his place of work.
- (f) The term *not married* comprises persons who at the time of the survey had never been married, were widowed or divorced.
- (g) *Main English-speaking countries* comprise the United Kingdom, Ireland, Canada, the United States of America, South Africa and New Zealand.

#### Reliability of the estimates

- 8. Since the estimates in this publication are based on information obtained from occupants of a sample of

dwellings they are subject to sampling variability; that is, they may differ from the figures that would have been produced if all dwellings had been included in the survey. More information on this topic is given in the Technical Note, Page 38.

#### Related publications

- 9. Other ABS publications which may be of interest include:

*The Labour Force, Educational Attainment Australia* (6235.0)

*The Labour Force, Australia* (6203.0)

*Labour Force Experience* (6206.0)

*Persons Not in the Labour Force* (6220.0)

*Persons Looking for Work* (6222.0)

- 10. All current publications produced by the ABS are listed in *Catalogue of Publications* (1101.0) which is available free of charge from any ABS office.

#### Symbols and other usages

- \* subject to sampling variability too high for most practical uses. See paragraph 8 above.
- .. not applicable
- n.a. not available

- 11. Because figures have been rounded, discrepancies may occur between sums of the component items and totals.

TABLE 1. SUMMARY OF CHARACTERISTICS

	<i>Males</i>	<i>Females</i>	<i>Persons</i>
<b>Civilian population (a) in February 1979</b>	<b>5,154.9</b>	<b>5,267.9</b>	<b>10,422.9</b>
<i>In the labour force at some time during 1978</i>	4,265.6	2,659.9	6,925.5
Employed at some time during 1978	4,139.0	2,499.9	6,639.0
Number of employers worked for (b) (or businesses) during 1978 –			
1	3,563.7	2,218.0	5,781.7
2	414.8	215.2	630.0
3	81.3	41.0	122.4
4 and over	79.2	25.7	104.9
Not employed at the end of 1978	314.9	393.8	708.7
Employed at the end of 1978	3,824.1	2,106.1	5,930.2
For one year or more in job held at the end of 1978	2,946.9	1,524.9	4,471.8
For less than one year in job held at the end of 1978	877.2	581.3	1,458.5
Did not have a previous job in the year	227.6	289.9	517.6
Had a previous job in the year	649.6	291.3	940.9
Did not change usual residence when obtaining job held at the end of 1978	704.5	483.8	1,188.2
Changed usual residence when obtaining job held at the end of 1978	172.7	97.5	270.2
Left a job in 1978	964.1	685.2	1,649.3
Did not leave a job in 1978	3,301.6	1,974.6	5,276.2
<i>Out of the labour force for the whole of 1978</i>	<i>889.3</i>	<i>2,608.1</i>	<i>3,497.4</i>

(a) Non-institutional civilians aged 15 years and over. (b) Not including second jobs of multiple jobholders.

NOTE The estimates relate to the labour mobility in 1978 of persons covered by the survey in February 1979. Because of emigration, deaths and other exits not all persons employed in 1978 were covered. Labour mobility may relate to experience outside Australia.

(a) Includes family helpers.

## TECHNICAL NOTE

## Estimation procedure

The estimates are derived from the monthly population survey by use of a complex ratio estimation procedure, which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself.

## Reliability of the estimates

2. Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability; that is, they may differ from the figures that would have been produced if all dwellings had been included. One measure of the likely difference is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample, and not the whole population, was enumerated. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors.

3. Space does not allow for the separate indication of the standard errors of all estimates in this publication. A table of *standard errors* for general application is given below. These figures will not give a precise measure of standard error of a particular estimate since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics. However, they will provide an indication of the magnitude of the standard error of any particular estimate. An example of the calculation and use of standard errors is as follows: the estimated number of males out of the labour force for the whole of 1978 is 889,300 (Table 1). From the table below it will be seen that the estimate has a standard error of about 12,200

and therefore there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall within the range 877,100 to 901,500 and about nineteen chances in twenty that it will fall within the range 864,900 to 913,700.

4. The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the numerator and the size of the denominator. However, the per cent standard error of the estimated percentage will generally be lower than the per cent standard error of the estimate of the numerator. The per cent standard errors of the numerators can be obtained from the table below.

5. As the standard errors in the table below show, the *smaller the estimate the higher is the relative standard error*, very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication estimates less than the lowest levels shown in the table below have not been included. Although figures for these small components can in some cases be derived by subtraction, they should not be regarded as reliable.

6. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents. Inaccuracies of this kind are referred to as the *non-sampling error*, and they may occur in any enumeration, whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.
